

# Having TRU control of their business energy across their entire estate

TRU (Transitional Rehabilitation Units) Ltd. provide specialist rehabilitation facilities for people who have an Acquired Brain Injury (ABI). Much of the group's rehabilitation programme is carried out across 12 residential units and outreach facilities throughout the North West of England.

Managed centrally, the gas and electricity contracts differed at each site in terms of the incumbent supplier, contract rates and end dates. Many sites had supplies that were out of contract and therefore demanding unrestrained rates.

Following a review of TRU's 18 supply points, Brownlow Utilities were able to bring some control, clarity and competitiveness to the group's energy portfolio.

- Consolidated energy usage across the entire estate
- Contracted one supplier for gas and one supplier for electricity
- Managed a common end date of 30/09/2018 for all sites
- Generated savings of **£40,768.99 (60.22%)**
- A dedicated Account Manager is on hand to offer ongoing support

Gill Barker, Managing Director of TRU Ltd. said

**“Thanks to the Brownlow team, we can now see, control and optimise our energy usage across the whole of the TRU estate whilst enjoying ongoing savings. I really appreciate the help that they gave over and above their own duty of care when a damaged meter interrupted gas supply at a key site over the winter period. We value their continued support”.**
